

Corporate e-Messaging

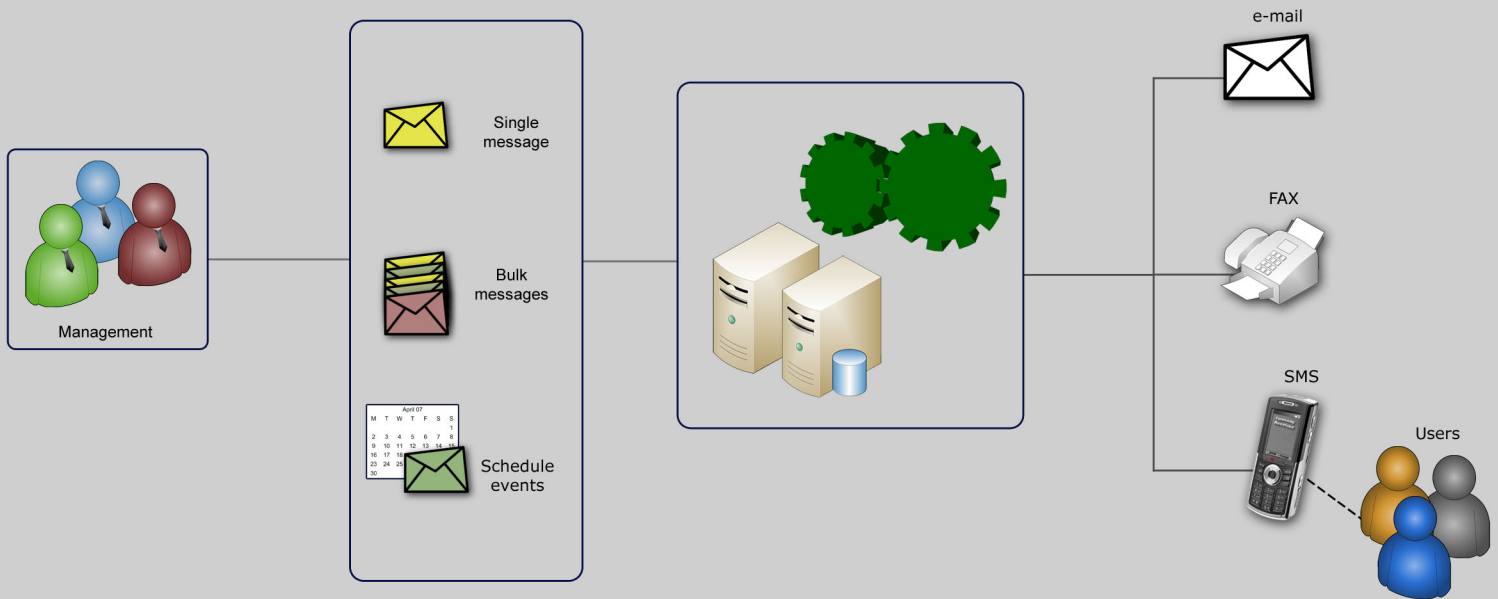

Need to notify your employees of a scheduling change? Or give your customers the ability to request forms and information on the go? Then ForeVision's eMessaging service is what you need. Put the power of on-the-go communication, in the hands of your managers, employees, and customers. Send messages to your employees notifying them of updates or changes. Give your customers the ability to request forms and info to be sent to their emails, fax, and even mobile devices. Our eMessaging is an efficient and cost effective way to manage your communication needs.

Overview

Users can request forms, schedules, list of requirements, procedures, policies and virtually any other information a company or agency wants to provide, and have it sent to their fax, email, or mobile device through SMS. At the same time, managers can send single, bulk, or scheduled messages to employees to relay information. Companies can also send information through SMS to customers and users for marketing, account information and much more.

e-Messaging system

Features

- Send individual or bulk SMS messages
- Schedule different tasks, or reminders to run at different periods of times
- Track different functions and events and be notified before/after their completion
- Send information through fax, email or SMS messaging.
- Control time, frequency of transmitting SMS messages, and manage their quota
- Configurable SMS engine to work with different protocols such as SMSC and SMPP
- Create multi-function modules which interact with users by replying to their SMS messages with static or dynamic data, fax or email.
- Can communicate with different types of databases at the same time.
- Easily integrated with other applications such as Workflow, Help Desk Systems, Human Resources, Document Management and archiving systems.
