

Overview

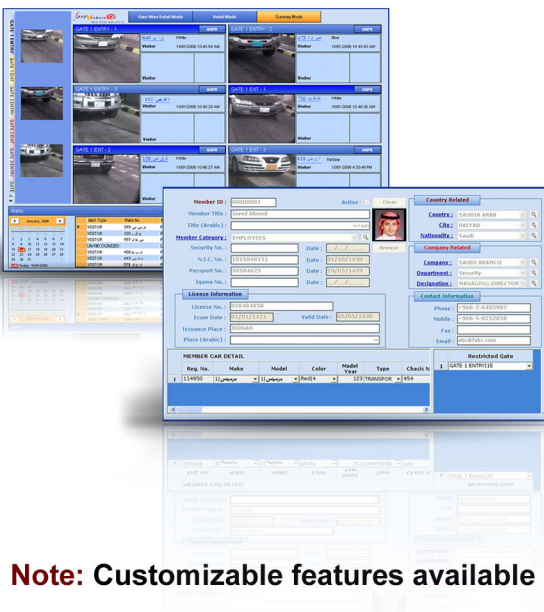

Whether the parking management system is manual or automated, operating parking facilities can be a challenge. But with modern technology and the right partner, no challenge is impossible. Increasing the Efficiency and Effectiveness of any parking system is always difficult. However with the right mix of hardware, software, and implementation, you can provide a convenient, secure, and pleasant parking experience. From Hardware to Software, ForeVison offers Total Parking Solutions. Imagine ticket dispensers, barriers, vehicle space detectors, electronic sign boards, auto-pay stations, exit verifiers, and even ANPR, all working together to help automate processes and increase cash flows.

How it works!

- At entry point vehicle receives ticket from dispenser
- Combined with ANPR the Plate Number can be logged
- Once ticket is received, the barrier opens allowing entry
- Space detectors and sign boards can direct drivers to available parking for their convenience
- Upon exiting, payment can be made at an auto-pay-station or exit-pay-station
- At an auto-pay-station, the drivers' receipt is verified at the exit gate
- For exit-pay-station, the driver pays at the gate
- Other options include a manned booth to collect payment
- Once payment is verified, the barrier opens
- With ANPR, the plate number is logged for time of exit
- When combined with ANPR, vehicles can be classified as employee, VIPs' and many more options
- A link with governmental agencies can provide watch and black lists

Software Features

Note: Customizable features available

- Multilingual
- Customizable interface
- Control access times(e.g. 9am-5pm)
- Fee, discount and penalty settings
- Support multi currencies and denominations
- Works with ANPR, RFID, and biometric solutions
- Define classifications such as employees, VIPs', and visitors.
- Police or traffic agencies integration
- View reports
- Queries
- And many more!
